Press release

Interphex 2018, the Marchesini Group focuses on aseptic packaging and cosmetic packaging market strategies

West Caldwell (New Jersey) – In April the Marchesini Group will be returning to the Jacob K. Javits Center in New York for the 39th edition of **Interphex**, the premier pharmaceutical, biotechnology and medical device development and manufacturing event in the U.S. This year again, Marchesini's American team is anticipating a well-attended booth with the *FSP 05* syringe filler and *DUMEK TURBO-MEK 150* turbo-emulsifier on display.

Machines exhibited

Machine model *FSP 05* has been developed to meet the increasing production requirements of products classified as pre-filled syringes. This filling and stoppering machine for nested syringes is compact and flexible, able to produce **up to 12.000 pieces/h**. The machine offers excellent fill accuracy with various dosing options, and precise and gentle centering and handling of syringes which minimizes the risk of breakage.

The *FSP 05* will be joined by *TURBO-MEK 150* vacuum turbo-emulsifier, illustrating Marchesini Group's dedication to the cosmetic market. This can also be seen in Marchesini's creation of a **dedicated beauty division** with Headquarters and manufacturing to be situated near Marchesini Group HQ in Pianoro.

The *TURBO-MEK* machines are designed to **process liquid and creamy products** such as emulsions (cream and milk products), serums, oils and balms, gels and lotions. Special versions of these machines can process other products such as make-up (mascara, foundation), hair dyes, toothpaste and mud products.

All the functions required to ensure efficient operation of the turbo-emulsifiers and to set the working parameters are managed and programmed from the control panel.

On the stand of Marchesini's co-exhibitor, **SEA Vision**, will be model *BL A309* carton serialization unit, manufactured at **Neri** facility. SEA Vision is one of the leading Italian suppliers of vision and inspection systems used in Quality Control and Drug Counterfeiting.

On January 31st 2018, the Marchesini Group signed a **48% acquisition of SEA Vision**, an agreement which will allow the Group to create packaging machines that are even more unified with SEA Vision's systems, in order to guarantee customers a **true 4.0 asset**.

"Interphex is an extremely valuable platform connecting leading technologies and companies in the industry" said **Roger Toll**, Executive Vice President of Marchesini Group USA. "This year, visitors will find an effective blend of innovation and technology creating efficient and advanced solutions in the pharmaceutical industry".
