The Marchesini Group closes the acquisition deal with CMP PHAR.MA

Pianoro (Bologna) – The Marchesini Group closed the acquisition deal with **CMP PHAR.MA** yesterday. The 60% acquisition of the company from Costabissara (Vicenza, Italy) specialised in inspection systems for the world of pharmaceuticals was already made official last December.

Back in 1982, less than 10 years following its foundation, CMP was the **first company in the world** to offer the market an automatic vial inspection machine with laser rays. Subsequently, CMP consolidated its standing by putting together a range of machinery which now includes a wide array of automatic and semi-automatic inspection machines for vials, containers, pre-filled syringes, infusion bags and freeze-dried products. Production diversification and expansion has boosted the company's turnover, which in 2018 exceeded 9 million Euro, **35% more** than the previous year.

The internationalisation of CMP's know-how further enhances Marchesini's impressive range of products, offering stand-alone machines and complete lines capable of fully packaging all types of products of the pharmaceutical and cosmetic industries from start to finish.

The transaction with CMP will allow the sales department of the Marchesini Group to fully satisfy even the most complex requests of customers, including the inspection and control phases.
